HRIDAYA SHRESTHA

+977 9825805154 | Kathmandu, Nepal | github.com/ridayasth4 | ridaya350@gmail.com

EDUCATIONAL BACKGROUND

Bachelor in Computer Science and IT

Institution : Himalayan College of Management
Affiliation : Infrastructure University, Malaysia
Current : 4th semester
Website : https://hcm.edu.np/program-details/bachelor-of-computer-science-technology-bcs-it

Diploma in Computing and IT

Major : Software Development
Institution : Dursikshya Education Network
Affiliation : Scottish Qualification Authority
Website : sqa.org.uk/sqa/81334.html

TECHNICAL SKILLS

- Front-End : HTML5/CSS3, JavaScript (ES6), Bootstrap, Tkinter
- Back-End : Python (Django), jQuery, PHP
- Database System : Advanced MySQL, Relational Databases
- Tools & Frameworks : Git, GitHub Pages, Data Structures, Networking Basics
- Data Analytics: Pandas, Matplotlib, Seaborn, Microsoft Excel, Power BI, Canva
- Problem Solving : Debugging, Bug Fixing, Code Optimization, Technical Support

CERTIFICATIONS

Cybersecurity and AI/ML

Conducted by : Global IOT Institute, Kathmandu

PROFESSIONAL SUMMARY

Computer science student passionate about full-stack development and data analytics, seeking an internship to build scalable web applications and enhance backend systems.

PROJECTS

- Capstone Project: Full-Stack Ecommerce Platform (Django)

Designed and developed a full-stack ecommerce site with AI-driven recommendations, user authentication, order tracking, search optimization, and secure checkout; maintained using Git. GitHub

- Blog Website Development (Django)

Optimized a Django web app by debugging database migrations, fixing authentication flows, improving API communication, refactoring backend logic, enhancing SEO, and deploying stable builds to staging environments. GitHub

- Advanced Database Design for E-commerce Platform

Designed a normalized SQL database with ERD, data dictionary, constraints, and indexes; developed SQL scripts for managing product inventory, customer orders, and sales reports, ensuring optimized data retrieval and integrity.

- Enterprise Network Design & Implementation

Engineered a redundant enterprise network with VLAN segmentation, OSPF dynamic routing, DHCP server setup, SSH hardening, wireless integration, NAT, and ACL configurations, ensuring seamless and secure connectivity.

- Student Performance Data Analysis and Visualization

Performed data preprocessing and EDA (using Pandas, Numpy, and Seaborn) and built and evaluated a linear regression model to predict student outcomes, with MSE and R^2 metrics guiding model performance tuning.
